Abstract (en)

The dispenser (1) has a container with a body comprising an outer axial wall and an inner axial wall (41) forming an axial annular cavity (43) between them. The container has an axial annular skirt forming a ring that displaces axially in the cavity by a manual force such that the ring forms a lateral axial wall of another cavity. The latter cavity with a product (7) has variable volume due to relative axial displacement of the ring.
