Abstract (en)

[origin: EP1674003A1] The structure (1) has a bedding plate (2) and side rails (3) connected by crosspieces (4), where the plate is made of a carton based material comprising a honeycomb core (5). Each rail and crosspiece is formed of a carton based material comprising a honeycomb core (7) sandwiched between carton sheets. Cells of the cores are oriented in direction perpendicular to plate's plane when the rails and crosspieces are assembled to the plate. An independent claim is also included for a method for fabricating a springer structure.
