Abstract (en)

[origin: EP1674283A2] The present invention provides a recording paper comprising: a resin-coated paper comprising a base paper at least one surface of which is coated with a resin; and an ink-receiving layer provided on the resin-coated paper, and being printable by an ink-jet printer, wherein the recording paper has a thickness of 280 µm or more and a stiffness defined by JIS-P8125 of 2.8 to 4.0 mN·m, and gives a decreasing rate in friction coefficient of a paper-contacting surface of a paper-feeding roller of an ink-jet printer between before and after friction of the paper-contacting surface with the ink-receiving layer plural times of 5% or less.
