Abstract (en)
A two-way mailer (100) of thermoplastic material comprising a pocket formed of a lower panel (102) and an upper panel (103) joined together along three edges (104, 105, and 106), either by sealing or by folding, with the unsealed edge of the lower panel extending to create a flap (108) that can be folded over and adhesively secured to close the pocket once the product (23) to be sent has been loaded therein, said pocket (110) being characterised in that it contains along at least one of the sealed or folded side edges one or more discrete heat-sealed regions (126) that are designed to keep the packaged product (23) away from the pocket edges (104 and/or 105 and/or 106). This feature does allow an easy, quick, and safe removal of the packaged item from the discardable mailer.
