Abstract (en)
The compressor has a cylinder with a piston that is connected with a crankshaft by a piston rod. The crankshaft side end of the rod is supported at the crankshaft by a big end bearing (9) having a load ratio within the range of 2 to 6. The ratio is obtained from $C \text{ dyn} / (A \text{ piston} \times p \text{ compressor})$, where $C \text{ dyn}$ refers to the dynamic bearing load rating, $A \text{ piston}$ is the piston surface area and $p \text{ compressor}$ is the nominal operating pressure. An independent claim is also included for a commercial vehicle with a dry run piston compressor.
