Abstract (en)

[origin: EP1674829A2] The system has an interface, which is laid on two signal lines (112) of a display (108) to show the display data and to access the display data directly or indirectly. The system has a signal transducer device and with which an interface can be brought in signal connection, to record the control pulse of display via interface and to convert the control pulse into transducer signals. The system has an evaluating processor unit which lies in the signal connection with the signal transducer device and has means to retrieve the display data from transducer signal and to display the retrieved display data via the signal connection.
