Abstract (en)

The method for determining an applicable policy for an incoming message having a service-level addressing element comprises the following steps: a) applying a potentially applicable policy (P1) on the incoming message (M1) to make the service-level addressing element of the incoming message (M1) visible, b) if the service-level addressing element of the incoming message (M1) gets visible, and is the one to which the currently applied policy (P1) is associated, the currently applied policy (P1) is determined to be the applicable policy (P), and otherwise c) the steps a) and b) are repeated with a further potentially applicable policy (P2 ... Pn).
