Abstract (en)
[origin: WO2005035272A2] The invention relates to a valuable document, particularly a banknote, comprising a valuable document substrate and different feature substances for verifying the valuable document. According to the invention, a first feature substance is introduced into the volume of the substrate of the valuable document, and a second and third feature substance are, together, placed in a printing ink and applied in the form of a coding to the valuable document substrate. The second feature substance is formed by a luminescent substance, and the third feature substance is formed by a material that absorbs in a special spectral region. Both substances serve to identify the value of different user groups.
