Abstract (en)
[origin: WO2005038113A1] The invention relates to a weaving machine consisting of a mechanism for reverse run of a reed (1) composed of a multimember mechanism with a lowered reduced moment of inertia and coupled with a drive. The drive of the mechanism for reverse run of the reed (1) consists of a motor (6) with controllably variable spin velocity within each revolution, where it is coupled with a control device.
