Abstract (en)

Method for visualizing the hearing capability of a person with and/or without a hearing aid comprises making a hearing dimension, e.g. loudness awareness, using an image by changing an image parameter, such as brightness. An independent claim is also included for software for carrying out the above method. Preferred Features: Two hearing dimensions, e.g. loudness awareness and understanding, are made visible by changing at least two parameters, such as brightness and contrast.
