Abstract (en)

[origin: EP1676638A2] An apparatus for collecting dust and vacuum cleaner having the same are disclosed, by which dust collecting performance is enhanced. The present invention includes a dust collecting container (210) collecting the dust by separating the dust from an introduced air to discharge the air in an upper direction, an upper cover (230) assembled to an upper part of the dust collecting container, the upper cover having an outlet at one side to communicate with the dust collecting container, and a sealing member (234) provided to the upper cover to prevent the air from leaking via a gap between the dust collecting container and the upper cover.
