Abstract (en)
[origin: EP1676705A1] A scanning type printing device is provided capable of operating in a multiple printing stage mode. When operating in a multiple printing stage mode, this printing device is controlled such upon receipt of a delay signal, further printing is executed but only on the stroke of the image-receiving member whereon printing is in progress till the image portion associated with that stroke is completely printed. This is done in order to overcome or at least reduce gloss variations in a printed image when printing in progress is temporarily interrupted.
