Abstract (en)
[origin: EP1676967A1] The invention relates to a connecting piece (10) for mutually connecting construction elements. The connecting piece comprises for this purpose at least one male coupling part (11) to be received fittingly in a corresponding female coupling part on a construction element for connecting. The male coupling part is herein provided in a transverse direction with a continuous cavity (17) which, in coupled position, is at least substantially in register with a cavity in a wall of the female coupling part. A divided locking pin (40) is received in the cavity (17). The male coupling part (11) comprises a metal core (16) with the cavity (17) therein. The metal core (16) is at least partly enclosed by a plastic outer housing (15) which is received fittingly in the female coupling part.
