Abstract (en)
[origin: WO2005051080A1] The invention relates to a tube for conducting liquid and/or gaseous media, comprising at least one wall that surrounds a lumen. Said tube is characterized in that the material of the tube contains at least one oligodynamically active, embedded material at a quantity of 0.01 to 20 percent relative to the total weight. The invention further relates to the use of a tube for conducting liquid and/or gaseous media, comprising at least one wall that surrounds a lumen, said tube being characterized in that the material of the tube contains at least one oligodynamically active, embedded material at a quantity of 0.01 to 20 percent relative to the total weight.
