Abstract (en)  
[origin: WO2005048721A1] The machine for the treatment of alimentary paste or dough, so called "pasta", for the manufacture of products of pasta containing a savoury filling, comprises feeding means for feeding a sheet (4) of rolled-out pasta along a predetermined path (P) of advancement, to a working station (34). The feeding means comprise a dragging device (35) for the forced driving or dragging of the sheet (4) of pasta along the path (P) of advancement. The dragging device (35) is arranged at least partially upstream of said working station (34), with respect to the path (P) of advancement and comprises a flexible transmission member (22) extending along said path (P) and a plurality of gripping elements (30) for gripping the said sheet (4) of pasta. The gripping elements are arranged on the flexible transmission member (22) and are adapted to engage respective longitudinal portions (4a, 4b) of the sheet (4) of pasta. The gripping elements (30) consist of needles adapted to be inserted into the sheet (4) of pasta.
