Abstract (en)

[origin: WO2005044514A1] The invention relates to a guard for an electric machine tool comprising a rotationally driven insertion tool (14), with which the insertion tool (14) can be covered at least in areas. According to the invention, at least one blocking means (32, 40) is provided that at least prevents a turning about a rotation axis (18) of the insertion tool (14).
