Abstract (en)

[origin: WO2005024742A1] The invention relates to a method and a device for the individual, location-independent designing of images, cards, and similar, especially postcards. As opposed to conventional methods, systems, and devices for creating cards, photos, and similar, the invention makes it possible to view and select the basically finished product that has been created by the user; the payment and output function is enabled only thereafter. The inventive method is further characterized by an integrated process for taking portraits by means of a video stream.
