Abstract (en)

[origin: WO2005039008A1] The present invention provides a terminal for minimizing unauthorized use of electricity from a power line while allowing for distribution of electricity to the consumer. The terminal includes a splice closure and a terminal closure. The splice closure has at least two bridging electrical cables and a means for making electrical connection between the power cable and the bridging electrical cable. The terminal closure has at least one bus bar, a neutral terminal block, and means for routing distribution electrical cables out of the terminal closure.
