Abstract (en)
Razor comprises a handle (2) having a hollow chamber (4) arranged in its middle region for releasing a blade (4R). The walls of the handle are partially elastically deformable in the region of the hollow chamber to press out the blade. An independent claim is also included for a method for producing the razor. Preferred Features: The razor has a further hollow chamber (5) for releasing aftershave by pressing the walls of the further hollow chamber. The hollow chambers have a connection to the handle surface via holes (6A, 6R).
