Abstract (en)

It includes at least one measuring device (2) of pressing force, and it is characterised in that it includes control means (3,4) and means for interaction (5,6) with the user, said control means including a device for processing (3) the recorded signal from the measuring device (2), and a device for data management and processing (4) which, based on specific software, makes a comparison between the recorded signal and some preset regulating parameters, obtaining an automatic correction of the regulation of the pressing force until an optimum force value is achieved.
