Abstract (en)
Closing cylinder comprises a rocking arm (10) pivoting in a housing (1) or in a core (2) and penetrating a groove (15) in an opposite-lying component, in which the groove has a pocket facing the front side of the core. The rocking arm is pre-tensioned by the pocket by a spring force or by gravity. The rocking arm is made from a magnetic material. Preferred Features: The rocking arm is positioned in the housing and the groove is arranged peripherally in the core. The groove has a protrusion in the direction of the pocket. The rocking arm is pre-tensioned by a spring element (13) formed as a pressure spring or rotary spring.
