Abstract (en)
[origin: WO2005016080A2] A table and bench system may include a table and one or more benches that may be selectively attached and detached to the table. Advantageously, this may allow the table and benches to be easily moved, transported and stores. In addition, the table and bench system may include a handle that may assist in moving, transporting or storing the table and benches. Preferably, when the benches are attached to the table, the benches top are generally aligned to facilitate stacking of the table and benches. In addition, when the benches are attached to the table, the legs of the table are preferably disposed generally adjacent to the legs of the benches. Further, the upper surfaces of the benches tops preferably face in an opposite direction than the upper surface of the table top because that may create generally aligned surfaces, which may facilitate stacking and shipping of the table and bench system
