Abstract (en)

[origin: WO2005038115A2] The device comprises a stitch cam (25) and cam elements (29, 31, 33; 41, 47, 49) adjustable in different positions to carry the selected needles to idle, tuck and clearing positions respectively. The cam elements comprise at least two raising cams (31, 33; 47, 49) adjustable with a movement essentially orthogonal to the direction in which said needles slide, and at least one counter-cam (29; 41), adjustable according to an adjusting movement essentially parallel to the direction in which said needles slide.
