Abstract (en)

[origin: FR2861907A1] The device has a connecting strip (28) that is guided in housing and controlled by a disk (33). The disk is integrated to a toothed wheel, which is driven by a worm screw. Two pilot points (34, 35) are placed on the radius of the disk, where the point (34) opposes the sliding of a piston in a closing direction. The point (35) hooks on a guide track (40b) to control the sliding of the piston in an opening direction.
