Abstract (en)

[origin: EP1681108A1] A mobile cleaning installation for water supply systems is designed as a vehicle (20) having a fixed installation therein which contains a series circuit of, successively, a heating unit (12), a storage tank (13), a hydrophore (14) and a chemical injection unit (15). Parallel thereto are provided selectively activated air supply means (16a,16b,16c). Further are provided series circuit selectively activated bypass circuits around the heating unit (12), the storage tank (13) and the chemical injection unit (15), respectively. A series of different steps for treating the water supply system is realized by selectively activating the bypass circuits.
