Abstract (en)
[origin: EP1681242A1] The invention relates to a container comprising four sides (12, 14, 26, 18) that meet in corners (A, B, C, D), a bottom (40), a mouthing (11) opposite the bottom (40), and a handle (30), wherein the handle (30) is hingedly connected to the container (10) at two opposed corners (A, C). The container is characterised in being configured for allowing turning of the handle (30) between a first position in which the handle (30) is laid down in a direction towards a first corner (D), and a second position in which the handle (30) extends essentially vertically, said container (10) comprising means (36, 23') configured for preventing or counteracting a further rotation of the handle (30) from said second position in a direction towards a second corner (B) arranged diagonally opposite the first corner (D).
