Abstract (en)
[origin: EP1681404A2] Extruded ceramic facade panel (20) has core hole extending in the extrusion direction. The wall between the core hole (24) and the facade panel rear side has protrusion (22e) on the core-side face or recess on the face constructed on the facade panel rear side. The thickness of the wall at the protrusion between the highest point of the protrusion and the facade panel rear side, and at the recess between the highest edge of the recess and the face on the core hole side is equal to the thickness of the head rebate (25) and/or the foot rebate (26) of the facade panel. An independent claim is included for a method for the manufacturing of a facade panel for a suspended ventilated facade construction.
