Abstract (en)

At least a first modular element (2) and a second modular element (2') each exhibit a pair of uprights (3), preferably a right upright (3a) and a left upright (3b), each developing vertically and having a straight transversal section, which uprights are associated to at least two crossbars (4,5) and a panel (6) connected thereto; the process includes making a first series of holes (7) on the right upright (3a) of a first modular element (2) and a second series of holes (8) on the left upright (3b) facing the right upright (3a), belonging to a second modular element (2'). Thereafter the first series of holes (7) are connected to the second series of holes (8) by removable means for connecting coupled to spacers (10).
