Abstract (en)
[origin: EP1681417A2] The fitment (22) has a track rail (20) and actuating rod (7) on the casement (2). A closure mechanism is fixable by a housing on the rear movable carriage (10') on the horizontal casement bar (2) inside the fitment groove (23) and can be coupled to the rear carriage whereby a bolt during displacement of the drive rod (8) of the actuating rod as the casement is lowered can be transferred through a guide on the closure mechanism into a closed position. The bolt engages with a bolt catch mounted on the track rail.
