Abstract (en)

[origin: WO2005046837A1] The invention relates to a filter plate (1) comprising a support ring (4) which surrounds an axial opening which is used to supply sludge (2). Said filter plate comprises a connection element (10) provided with at least one retaining branch (10b), and a catching branch (10a) which extends in an axial manner, said catching branch being provided with toothing (14) which engages with counter-toothing provided on the support ring (4), forming a catching connection.
