Abstract (en)

[origin: WO2005054057A1] The invention relates to a device for packaging different objects, in particular bouquets of flowers. The inventive device is characterised in that it consists of: a flat surface (4) which comprises an opening (3) and which can receive a packaging film (2); a plug element (6) which is disposed in the axis of the opening, whereby either the plug or the opening can move in relation to the other between a position in which the plug is disposed at a distance from the opening and a position in which the plug (6) is inserted into the opening (3); and a ring (9) comprising at least two mobile parts (9a, 9b) which can move between a position in which they form a continuous ring and a position in which a restricted space is defined therebetween, which can be used to tighten the packaging film (2) prior to the formation of a link.
