Abstract (en)
[origin: WO2005047124A1] The invention relates to a fixing system, for connecting a folding container, made from corrugated cardboard, to a base plate, for example a palette base or a stacking container top, characterised in that clips (4) and/or clipping bars (5) are arranged on the free edge of the folding container (1), with clip jaws (15), arranged on a clipping base (18) and one or more tabs (6), on the clipping base roughly opposite the clipping jaws, extending beyond the clipping base. Clipping teeth (16) are arranged offset to each other on both clip jaws of a clip of a clip bar, the length of which roughly corresponds to the width of the clipping base or which extend beyond the same. Guide angles (12) with plug slots (14), corresponding to the tabs, are arranged, for example, on the palette base (10) or the container top (11), such that said guide angle forms a guide groove (13) with the edge of the baseplate, for example, the palette base or the container top.
