Abstract (en)

[origin: WO2005045987A2] The invention relates to an antenna arrangement (1) for emitting and receiving electromagnetic signals. The antenna arrangement (1) comprises: a flat supporting substrate (2) made of a dielectric material; a first conductor track (32) applied to a surface of the supporting substrate (2), said first conductor track (32) having, at one end, a contact point for collecting or injecting the signals and having a first dipole (50, 51) at the opposite end; a second conductor track (42) applied to the other surface of the supporting substrate (2), the second conductor track (42) having, at one end, a contact point for collecting or injecting the signals and having a second dipole (60, 61) at the opposite end. The first and second dipoles (50, 51, 60, 61) form a crossed dipole.
