Abstract (en)

[origin: US2007082538A1] The invention relates to a connector (24) for electrically connecting consumers (34), especially in bus systems, comprising a cable section, especially for an automotive heating or air-conditioning installation. The invention provides an improved system For establishing contact between a cable section, bus-capable electronics (4) and a consumer (34), which allows for an inexpensive and variable design of cable sections and for the simultaneous standardization of the interfaces between cable sections and peripherals.
