Abstract (en)

[origin: WO2005046279A2] The invention relates to a communication method using a mobile device comprising mobile telecommunication means (e.g. GSM, GPRS, UMTS, CDMA, W-CDMA, etc.) and means for accessing a wireless local network. The invention is characterised in that it comprises the following steps consisting in: saving user profiles in a digital database, each profile comprising a digital identifier; sending a first request which comprises a plurality of parameters and which travels over the wireless local network; sending a second request to a server, which comprises at least one list of identifiers and which travels over the mobile telecommunication network; processing the second request at the server, using the database comprising the user profiles; collecting a response to the second request from the server and displaying said response on a screen of the mobile device.
