Abstract (en)

[origin: WO2005046148A1] A messaging server (112, 612) stores messages exchanged using a messaging system. Messages, and components of messages, are cached (120, 618) closer to the messaging clients (116, 616). Messaging client (116, 616) requests for messages are served from the cache (120, 618) rather than from the messaging server (112, 612). The messages can be secured using security information (920) stored at the messaging server (112, 612). The messaging server (112, 612) sends the security information directly to the messaging clients (116, 616).
