Abstract (en)
[origin: EP1683449A1] The present invention relates to a refrigerator with an outer cabinet surrounding an inner shelf carriage (109) having a plurality of shelves (111). The shelf carriage is accessible from a rear side thereof. The shelf carriage is connected with a connection device (201) and the connection device is connected with the outer cabinet (102) such that a controlled movement of the shelf carriage in relation to the cabinet is provided. The controlled movement provided by the connection device is such that the shelf carriage is movable between a display position at least substantially inside of the outer cabinet and a refill position at least substantially outside of the outer cabinet. The controlled movement comprises rotation of the shelf carriage for providing access to said rear side thereof.
