Abstract (en)

Clothes washing or drying machine comprising: means for setting and controlling the operating cycle of the machine, response and user information means, means for processing the commands received from said control and setting means. The control and setting means comprise: selection devices associated to specific control variables that can be selected independently from a plurality of different states, and said response means comprise a plurality of user-information display devices, each one of which is adapted to take a respective multiplicity of states, to each one of which there corresponds a particular combination of the states taken by said control variables. Each combination of said plurality of distinct states of said control variables is associated to a predetermined set of instructions and programmes residing in said data storage means and adapted to act on respective operating devices of the machine.
