Abstract (en)

[origin: EP1683934A2] The lock has a latch (2) provided in a housing, where a pusher nut (3) strikes the latch such that the latch shifts against a resetting force of a latch spring (10), from a front closed position to a rear closed position, through the rotation of the nut against a resetting force of a pusher nut spring. The springs (10,17) are formed as integral components of the latch and the pusher nut by plastic injection molding.
