Abstract (en)

The system has a closure rod (40) sliding along an axis parallel to a plane of a door and actuated by a maneuvering unit. A stud (20) is fixed against the door. A guiding piece (30) is fixed with the stud and comprises cavities (35,36) for receiving the rod. The stud is inserted in the cavities and has a head (23) for maintaining the rod along a direction perpendicular to the plane. An independent claim is also included for an electrically protective enclosure comprising a door with a closure system.
