Abstract (en)
The phone has a voice entry component (S) attached at a microphone (M). The component is capable of converting a text of spoken sequence of alphabetic characters to a sequence of binary codes e.g. American standard code for information interchange (ASCII) codes, that correspond to the exact spoken sequence of characters. The phone is capable of sending the spoken text as short messaging service (SMS) message to another cellular phone. An independent claim is also included for a method of operating a cellular phone.
