Abstract (en)

[origin: US2006254244A1] An agricultural machine for grouping windrows together or for windrowing products lying on the ground, comprising in particular a main frame supporting a central gathering and windrowing device and two side gathering and windrowing devices connected to support arms that extend laterally during work, each of said side support arms being articulated relative to the main frame on a substantially vertical axis about which it is foldable at an angle of approximately 90° for transport and each of said side gathering and windrowing device being articulated on its support arm by means of a substantially horizontal axis about which it is foldable upwards at an angle of approximately 90° to obtain a reduced machine width for transport.
