Abstract (en)

[origin: WO2005040990A2] The invention provides a carrier for hands-free support of tablet and notebook computers to allow use of the device while standing upright. The carriers are convertible between an in-use configuration and a carrying case configuration. The carrier features include a platform having an inner portion and an outer portion and sidewalls extending away from the outer portion such that the platform and the sidewalls together define an open-top receptacle adapted to receive a portable computer or other display device. The receptacle has at least two opposing portions for attaching or otherwise securing strap fixtures for connecting opposing ends of a user strap.
