Abstract (en)
[origin: WO2005044344A1] Disclosed is a device for administering an injectable product, comprising a housing (1, 10), a product container (2) that is accommodated by said housing (1, 10), a piston rod (16) which acts upon a piston (3) in a direction of propulsion (V), and a spring (15) that acts upon the piston rod (16) in the direction of propulsion (V). The product container (2) is movably mounted and is provided with a piston (3) which is accommodated so as to be movable in a direction of propulsion (V) in order to dispense product. The piston rod (16) is removably retained in a holding engagement counter to the force of the spring (15) in a holding position. The spring protrudes into the container (2) in the holding position.
