Abstract (en)

[origin: WO2005051673A1] The invention relates to a strip-type, layered, heat-sensitive recording material containing at least one substrate, a heat-sensitive recording layer comprising colour formers and colour acceptors, and a UV-crosslinking printing dye that is printed on the recording layer in order to create a protective layer. The invention also relates to a method and a coating machine for producing one such strip-type, layered, heat-sensitive recording material.
