Abstract (en)
[origin: FR2861513A1] The device has a unipolar switch (K) that controls supply to an actuator (3) by connecting it to a power grid via a rectifier unit. The rectifier unit is formed with diodes (D1, D2) that are mounted in parallel. The diodes are connected between the phase of power grid and the switch, where a cathode of the diode (D1) and an anode of the diode (D2) are connected to different contacts (UP, DN) of the switch.
