Abstract (en)  
The present invention refers to a drawer whose lateral (13, 15) and rear (14) walls are formed from a single laminated piece that includes at least two weakened areas (11, 12) defining the bending regions for formation of said lateral (13, 15) and rear (14) walls. According to the present invention, the need to assemble the rear wall to the lateral walls is eliminated, thus saving time of assembly and eliminating the use of means of fastening, like bolts, nuts, pins, pegs, etc.
