Abstract (en)

[origin: EP1686074A1] The receptacle has a cover (3) mounted pivotally with respect to a container (2) around a rotational axis. A connecting unit (20) fixed to the cover (3) transmits a resistant torque to the cover. A resistant unit (30) is integrated to the unit (20). A spring (31) of the unit (30) works in torsion to oppose rotation of the unit (20) around the axis, in both directions, from an angular reference position of the unit (20).
