Abstract (en)
The invention is based on a lamp, indistinctly a floor, table, wall or ceiling lamp, with a base body (3) on which one or more lampshades (1) are established, directly to, or by means of, arms (5) which include a head (6) inside each lampshade, equipped with attachment means to the latter and to the foot (3) or arm (5), on the bottom base of which, and optionally on its top base, a plurality of led diodes (8) are established, which are associated to a circuit (9) housed inside the head (6) that constitutes the lighting means of the lamp and which, by means of a switch (11) are fed by a group of cells (10) or batteries housed in the actual lamp, either inside the head (6), or else inside a housing worked on the base (3), in any case, being accessible through the corresponding practical cover.
