Abstract (en)
[origin: EP1686334A2] A condenser for an air-conditioning system, especially for a motor vehicle, comprises a collector into which a drying agent (8) especially in granular form, is deposited and where condenser, collector and drying agent are simultaneously soldered in a soldering atmosphere. The drying agent is sealed against the atmosphere during the soldering process after being deposited in the collector. An independent claim is also included for a simultaneous soldering process for the above system in which the sealing of the drying agent is removed by the effect of the soldering temperature.
